Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, 4 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Willi (2,258,834). Willi discloses a bearing shell for a crankshaft thrust bearing having a cylindrical shell, the inside surface of the shell forming a radial bearing surface for the crankshaft, and flanges (C,D) at both ends of the shell directed radially outward, the outer surfaces of the flanges forming an axial bearing surface for the crankshaft, the bearing shell comprising at least one oil passage (H,Q) running circumferentially on an inside surface of the shell, a groove (R) running along an outside of a crankshaft bearing shell and an orifice (S) passing through said shell connecting said oil passage to said groove so that oil may be provided to the flanges. Although the groove of Willi runs circumferentially with the groove (R), it also has an axial dimension, and therefore runs axially, even if only for a short distance. Willi further discloses clearance spaces, or openings located where the two shells meet, for oil distribution.

Response to Arguments

3. Applicant's arguments with respect to claims 1, 3, 4, and 6 have been considered but are moot in view of the new ground(s) of rejection.
